

ABSTRACT OF THE DISCLOSURE

A decorative fencing system is provided for use as a small fence or decorative accent for a yard. The fencing system comprises several different structural components that may be 5 joined in various combinations so as to create a limitless number of different configurations or arrangements. The components include base units, decorative end units and gate units, each of which may be attached to the other components in any combination thereof. Each of these components are attached to post sections 10 which are inserted through post rings or post hinges on the individual components to thereby allow for each component to be rotated to the desired position relative to the post section. The post sections are secured to the ground by means of stakes that are first driven into the ground and the post section is 15 then inserted into a sleeve in the stake to thereby provide support and stability for the fencing system. A separate and smaller pin is provided on the end units to anchor these components to the ground.
